Food can be the best medicine

Instead of going to the drugstore, here’s how to stay healthy with smart food choices

Are you searching for a magic pill to cure your ills? Well, look no further than the produce section at the grocery store or your local farmers’ market!

You might be surprised to find out that one of the best ways you can stay healthy and fight illness is by eating the right types of food.

And, you can save money and have a tasty meal.

Raid nature’s medicine cabinet

Here’s an easy way to start: Eat more fruits and vegetables. People who include more fruits and veggies in their diet are likely to have a lower risk of certain chronic diseases.1

Tips on eating more fruit and vegetables2,8

- Keep a bowl of fruit on your table, kitchen counter or fridge.
- Use pureed, cooked vegetables such as potatoes to thicken stews and soups.
- Juice your vegetables as a fun and tasty way to add them to your diet.
- Cut-up fruit is an excellent snack. Try apples, pineapples or melon.
- Get vegetables that are easy to prepare. Buy bagged salad or a veggie tray that’s already prepared for snacking.
- Order a veggie pizza and get toppings like green peppers, onions and mushrooms.

By having more...

| Omega-3s | Flossed, salmon and walnuts |
| Vitamin C | Oranges and berries (blueberries, acai berry and strawberry) |
| Iron | Lean red meat, spinach, kidney beans, lentils and peas2 |
| Fiber4 | Beans and peas1 Vegetables and fruit (whole or cut-up fruit is better than juice) Nuts, berries and brown rice4 |
| Potassium1 | Bananas, prunes, cantaloupe, honeydew melon, orange juice, sweet potatoes, white beans, tomato products, beet greens, soybeans, lime beans, spinach, lentils and kidney beans |
| Folic acid (folate)4 | Dark green, leafy vegetables, spinach, asparagus, Brussels sprouts and black-eyed peas2 Fruits, such as oranges, grapefruit and bananas1 |

- Be protected against certain types of cancer1
- Lower your risk of heart attack and stroke
- Cut the risk of heart disease, obesity and type 2 diabetes
- Reduce blood cholesterol levels
- Lower your blood pressure
- Reduce the risk of kidney stones
- Decrease bone loss
- Help your body make red blood cells
- Lower the risk of birth defects in the brain, spine or spinal cord, tube defects, spina bifida and anencephaly (Women who may become pregnant should eat foods high in folic acid, and may need to take a supplement.)
